

World Without Wires

Learn about and discuss the latest wireless technologies for computer networks, communications and next-generation mobile services.

Professor Andy Hopper
University of Cambridge

Tim Fowler
Radiant Networks

Richard Davies
Cambridge Consultants

James Collier
Cambridge Silicon Radio

Richard Black
Microsoft Research

Andy Rhodes
Scientific Generics

Manuel Segovia Martinez
TTP Com

Neville Hawkins
Invisible Networks

Keynote Address – the wireless landscape

Mesh networks – spanning the final mile

Software radio – its time has come

Wireless LAN and PAN

Wireless Integration

Bluetooth and beyond

Edge – bandwidth improvement at reduced cost

The Cambridge Broadband Ring

Cambridge University Engineering Department - 5th December 2002

World Without Wires is a one-day seminar organised by the Cambridge Branch of the Institution of Electrical Engineers as a service to its members and local technology businesses. The seminar is an opportunity to learn about and discuss what is happening in new wireless technologies. This seminar should benefit anyone with an interest in wireless technologies, and for those designing wireless systems it will be a valuable networking opportunity and opportunity to get up to date on the latest thinking. Speakers will be on-hand for questions and presentation slides will be available. Coffee, a buffet lunch and tea are provided. The cost is £50 for IEE members or £75 for non-members (some concessions apply) and the seminar is open to all designers, professionals, businesses, students, academics and members of engineering institutions.

Registration details on www.iee-cambridge.org.uk or email seminar@iee-cambridge.org.uk or call 01223 332655 and leave your name and address.
